

PRO JET

The Club Cannon Pro Jet is a power CO₂ jet that produces 25-30FT plumes of ice cold fog, using liquid CO₂. With its list of flagship features, it is the ideal choice for special FX professionals. The Pro Jet includes on board DMX control with RDM functionality, CO₂ passthrough, and a useful “purge lines” feature. The Pro Jet requires a Siphon CO₂ tank to operate properly. Due to the volume of CO₂ expelled, the Pro Jet is only meant to be used in well ventilated spaces.
